Wax Melt electric warmer

Your guarantee of a Safe, Reliable & Efficient product

The Aromamatic® Electric Wax Melt Warmer has been professionally designed to operate at a lower temperature than any similar apparatus which relies on either the naked flame or light bulb, eg: halogen lamps to provide its heat source. The safe operating temperature of the warmer, allows your Wax Melt to gently dissolve into liquid, revealing its delightful scent, and avoids the risk of burning your melts.

The self-regulating temperature of the Warmer does not vary when power is left on and remains constant at all time.

The Warmer's gentle temperature is warm enough to melt but not hot enough to burn your wax melts.

Instructions

Plug the Wax Melt Warmer into a standard electrical outlet and turn the power on. Please allow up to 15 minutes for the warmer to reach full operating temperature. Then simply add your favourite wax melt tart to the bowl. Take care not to overfill the Warmer as spilled wax may damage some surfaces. Water is not required to assist with the melting of Wax Melts.

How to Use

Remove all labels and packaging from your favourite Wax Melt or Tart and add to the bowl - do not overfill the bowl. The dissolving time of individual wax melts will vary with different products.

To remove used wax melts, ensure the melt has cooled and hardened before gently dislodging it from the Vaporizer. Wipe clean with a damp cloth and replace with a fresh melt/tart as desired.

Customer Assistance Guide

Q. Why don't I use water?

A. Wax Melt/Tarts do not require water to assist the dissolving/melting process.

Q. How long will the wax melt last?

A. Please refer to the manufacturer's packing for details.

To establish whether the Wax Melt Warmer is heating correctly please, do the touch test.

The Touch Test

Turn the warmer on and allow it to reach full operating temperature. This will take around fifteen minutes. Lightly touch the centre bowl with your fingers.

If it is warm to the touch and you cannot leave your fingers in the bowl, the warmer is heating and working correctly.
